

PRESS RELEASE

Another successful Airone Max 175 Installation

Ashcombe School in Dorking who are a long-standing customer of Zenith Canopy Structures, needed a new outdoor covered seating area for their students to use for outdoor eating, a central meeting place or as an outdoor classroom in the summer.

Ian Manners of Zenith carried out a site survey and recommended 2 x 7m x 7m (14m x 7m) Airone Max Canopy Structures to be installed between the school and their tennis courts.

Georgina Stone, the Business Manager at Ashcombe School accepted the quote and selected the canopies to be made in RAL 6055 Pine Green framework and RAL 226 Beige canopies which fitted perfectly in the environment.

In addition to the canopies being installed, Ford Contractors carried out a complete landscaping of the area including artificial grass and picnic benches.

Zenith had previously installed 1 x 5m x 5m Airone Tipo 150, 2 x 8m x 8m Airone Max 175 and 1 x 10m x 10m Airone Max 175 in other areas of the school.

A further 5m x 5m was added on to the original 5m x 5m at the Nursery School.

Georgina Stone is delighted with the new canopies and said "they fit perfectly in the new landscaped area. The students are now enjoying the benefits of them."

The Airone Max 175 is a steel framed canopy structure with soft PVC canopy put under tension. The canopies are fully waterproof, UV resistant, fire retardant and meet UK Building Regulations for wind and snow loadings.
