

CASE STUDY

Vela 150 Sail Canopies at Cranfield Technology Centre

Cranfield Technology Centre in Bedfordshire asked TDA Interiors of London to carry out a complete refurbishment of their Café. At the time they didn't have an outdoor covered seating area and it was part of the remit to include canopies.

In turn, TDA contacted Zenith Canopy Structures to provide several options for canopies that were eye catching but also functional at the same time. The College wanted a comfortable outdoor covered seating area that their staff could use all year round, regardless of the weather.

Ian Manners of Zenith initially quoted for 4 x 6m x 6m Vela 150 Sail Canopies. After careful consideration, TDA's client selected 2 x 6m x 6m Vela 150 Sail Canopies with black framework and Beige PVC Canopies.

The canopies were installed in conjunction with a completely new landscaping of the area and after TDA also carried out a refurbishment of The Café. It then became fully operational for the staff at The Centre.

The Vela 150 has wind and snow loadings to UK Building Regulations. The structures are manufactured with galvanised steel, powder coated in a choice of colours from Zenith's standard range. The canopies are made in 650gsm PVC and are fire retardant, 100% waterproof, have a PVDF varnished exterior coating, prolonging the lifespan of the canopy and ensuring easy cleaning. They also provide 100% protection from harmful Uva and UVb radiation.
