

## CASE STUDY

### Airone Max 175 with Glazed sides at Longdean School

Andy Wheeler, the Site Manager at Longdean School in Hemel Hempstead contacted Zenith requesting a quote for glazed sides for their existing 9.9m x 9.9m Airone Max 175 canopy structure.

Zenith originally installed the Airone Max in 2005 and when the school was rebuilt in 2016, it was relocated adjacent to the dining room. The canopy and framework was still in pristine condition as Zenith had carried out a cleaning and maintenance service for Longdean every 2 years since the original installation. Due to the increased number of students at the school they required extra enclosed covered space and by adding glazed sides with two sets of double doors the students are protected from the elements all year round.

After several meetings and with the COVID Pandemic interrupting the schedule of works, the glazing was eventually installed after the end of 'lockdown' in August 2022.

The school have now installed seating for 120 students. By adding heating and lighting, they are able to use the structure all year round.

In addition to the Airone Max structure, Longdean also have 2 x 6m x 6m Airone Tipo 150 structures.

Andy Wheeler of Longdean is absolutely delighted with the finished product. He said "the students will benefit from this new facility, not just for eating but also as a meeting point"

The Airone Max 175 is available in standard modular sizes or can be manufactured to specific sizes. It has a galvanised steel frame and is powder coated in a choice of colours from our standard range. The canopies are in a soft PVC also available in a variety of colours. The Airone Max 175 also has an integral gutter system.
