Canopy Structures Limited

# ZENITH CANOPIES

The Zenith Sports Structure is a large span canopy structure suitable for permanent and semi-permanent use. Standalone units are available in widths of up to 20 metres and lengths up to 40 metres. The Zenith Sports structure can be designed to suit most sizes within those parameters and being modular larger spaces can be covered using a combination of structures.

The Zenith Sports Structure is designed to cover large spaces protecting the covered area from the elements and therefore extending

the operational times of the covered spaces. Furthermore, the structure protects the playing area thus extending the lifespan of the surface and equipment.

Increased usage of the facility in turn ensures increased revenue from the uninterrupted venue hire. In addition, with the installation of suitable lighting an uptake in customers is almost guaranteed, providing accessibility to new operating hours, previously unattainable in certain weather conditions or at night time.

“Transforming spaces, creating year round usable places”

## Structure

The Zenith Sports Structure design comprises of repeating parts and clever engineering enabling it to be delivered and installed with minimal disruptions.

## Steel Frame

The Zenith Sports Structure is designed to suit site specific dimensions and fabricated from hot dipped galvanised steel. The structure has been tested for wind and snow load capacity in accordance with EC1 National Annex for the UK.

## PVC Cover

Working with our PVC suppliers for over 30 years, we have chosen a product that has proved itself throughout the years. High strength polyester fabric, resistant coated in PVC – Poly Panama 890g/m<sup>2</sup> is built to withstand the test of time.

The PVC is 100% waterproof, built to British Standards for fire retardant materials. Developed with an anti-fungal plus UVa & UVb resistant properties, for assurance of minimal maintenance throughout its lifetime

The Structure also benefits from the translucent properties of PVC which allows natural light to enter the space , creating a natural light experience.

“Delivering canopy structures to the leisure, hospitality & education sector for over 30 years”

## MUGA - Multi Use Games Area

The popularity of MUGA pitches is increasing all the time with the ability to cater for multiple sports across one pitch, utilising space to its maximum.

The Zenith Sports Structure in the largest width available, is comfortably able to cover a single pitch spanning 40 x 20 metres. However as the structure is modular with its endless add-on capacity, larger spaces can be covered.

With full protection from the elements you are able to operate multiple sporting activities regardless of the weather. Pitch maintenance reduces and the life span of your surface increases

Day time activities can proceed virtually as normal as the PVC canopy is translucent and allows natural light to penetrate through. Whilst evening activities can benefit from a variety of customisable lighting options.

## Schools

Sports education remains paramount for setting the foundation in a child's future development by carrying over good physical and mental health habits. Indoor facilities can truly help harbour these attributes.

The Zenith Sports Structure removes barriers of motivation, by offering a consistently comfortable, dry space in which children can practise and take part in sporthall year round.

Your school can make use of a vast covered space, utilising it for assemblies, dining halls and other events. It also broadens income possibilities, by opening facilities to the public and sports teams during weekends and holidays. Which in turn offers health and fitness benefits to the local community.

## Padel Tennis

Padel is the UK's fastest growing racquet sport, often described as a hybrid between tennis and squash. Known for its easy learning curve, beginners quickly find themselves immersed in rallies that surpass the duration of typical tennis matches, filled with exhilarating plays bouncing across the court. A covered court offers great exercise facilities year round to all ages and abilities.

Our Sports Structure offers the flexibility to cover multiple courts, boasting 20m widths and lengths that can be customised to accommodate various court configurations.

## Tennis

British weather is renowned for conditions that often do not favour tennis players. Outdoor courts have a huge limiting factor because of this and are not able to be utilised to their maximum potential.

The Zenith Sports Structure, creates an indoor facility allowing clubs to offer a full programme throughout the year, thus ensuring membership growth and retention. A case study example from LTA quotes 65% membership growth by adding an indoor court. Simultaneously outgoings reduce for on-court maintenance and equipment due to total protection from the elements.

If you're looking to build a new facility, or cover existing courts Zenith can offer bespoke solutions to suit one or as many courts as required.

## Netball

With netball remaining year on year the most popular female team sport played in England, covered courts are often seen as essential to continue the game throughout the year, thus nurturing developing talent in warm dry conditions or for a safe environment for all ages to participate and enjoy the sport.

Custom made, we have the ability to meet the court size requirements set out by England and World Netball.

## Upgrades/ Extras

- Solid wall variety of options along side
- Array of lighting options
- Heating / Air Condition options
- Drainage/ Water Recycling collection

*"I would like to thank Zenith for the excellent service received throughout the whole project from quotation to completion. This has been an expedient, efficient and collaborative venture for both parties, the workmanship, quality and finish have been and are exemplary"*

Snr. Site Manager - Fareham College
